Research Vision

I believe good machine learning research requires not just good modeling, but good data, evaluation, and hardware. I turn messy, ambiguous challenges into well-defined, tractable computational problems and ship useful solutions. I've done this across domains (biology, ecology, cryptography) and modalities (vision, language, audio) by figuring out what matters and applying my skills. I can lead large projects (BioCLIP, *CVPR 2024 Best Student Paper*), work well on teams (MMMU, *CVPR 2024 Oral*; Mind2Web, *NeurIPS 2023 Spotlight*; BioCLIP 2, *NeurIPS 2025 Spotlight*), and drive independent research and tooling (saev). I'm looking for roles where I can work on hard, real-world problems with strong teams.
